

Application

ActivityLifecycleCallbacks

`com.spilgames.framework.SpilApplication`

```
classDiagram
    class Application
    class ActivityLifecycleCallbacks
    class SpilApplication["com.spilgames.framework.SpilApplication"]
    Application <|-- SpilApplication
    ActivityLifecycleCallbacks <|-- SpilApplication
```

The diagram illustrates a generalization relationship. At the top, there are two boxes: 'Application' on the left and 'ActivityLifecycleCallbacks' on the right. Below them, centered, is a box labeled 'com.spilgames.framework.SpilApplication'. Two arrows point from the bottom of the 'SpilApplication' box to the bottom of the 'Application' and 'ActivityLifecycleCallbacks' boxes, indicating that 'SpilApplication' is a subclass or implements both of them.
